

MANOJ JANA

AI/ML Engineer | Python Developer | Computer Science Student

Nagpur, Maharashtra, India | [+91 8625925203](tel:+918625925203) | code.me.025@gmail.com | linkedin.com/in/manoj-jana-b78a10266 | github.com/themanoj-025

PROFESSIONAL SUMMARY

Computer Science student specializing in Machine Learning (ML), Deep Learning, Natural Language Processing (NLP), and Computer Vision. Skilled in building and deploying end-to-end AI/ML applications using Python, Scikit-Learn, TensorFlow, and PyTorch. Proficient in data preprocessing, data analysis, feature engineering, model training, model evaluation, and hyperparameter tuning. Hands-on experience with production-ready ML systems including a deployed spam classifier and a hybrid movie recommendation engine.

EDUCATION

GH Rasoni University, Amravati <i>B.Tech in Computer Science & Engineering</i>	2023 – 2027 <i>Pursuing</i>
Jawaharlal Darda English Medium School & Jr. College, Yavatmal <i>Higher Secondary Certificate (HSC) – Maharashtra State Board</i>	2023 <i>60%</i>
Free Methodist English High School, Yavatmal <i>Secondary School Certificate (SSC) – Maharashtra State Board</i>	2021 <i>70%</i>

PROJECTS

Smart Spam Email Detector | NLP, Machine Learning, Python, Streamlit | [Live Demo](#)

- Developed and deployed an NLP-based email classifier achieving 97%+ accuracy using TF-IDF vectorization, Multinomial Naive Bayes, and Logistic Regression.
- Automated the end-to-end ML pipeline – text preprocessing, feature extraction, model evaluation, and hyperparameter tuning – and deployed via Streamlit Cloud for real-time predictions.

Next-Gen Movie Recommendation System | ML, XGBoost, Scikit-Learn, Streamlit | [Live Demo](#) | [GitHub](#)

- Trained a hybrid recommendation engine on the MovieLens 32M dataset (87K+ movies, 32M+ ratings) combining content-based filtering with XGBoost/Random Forest statistical modeling.
- Integrated multi-factor similarity scoring – genre cosine, user-tag Jaccard, year Gaussian decay – and managed full model deployment on Streamlit Cloud with Plotly dashboards.

Real-Time Face Detection System | Python, OpenCV, Computer Vision

- Engineered a real-time face detection app using OpenCV and Haar Cascade classifiers, achieving multi-face detection at 30+ FPS on live video streams.
- Optimised image preprocessing, contour detection, and bounding box tuning – achieved 30%+ reduction in false positives and improved frame-rate performance.

TECHNICAL SKILLS

Languages: Python, SQL

ML / AI: Machine Learning, Supervised & Unsupervised Learning, Reinforcement Learning, Model Evaluation, Cross-Validation, Hyperparameter Tuning, Statistical Modeling, Scikit-Learn, XGBoost, Hugging Face Transformers

Deep Learning / CV: ANN, CNN (Convolutional Neural Network), RNN, Transfer Learning, TensorFlow, Keras, PyTorch, OpenCV

NLP & Data: Natural Language Processing (NLP), Text Classification, TF-IDF, Tokenization, Sentiment Analysis, Feature Engineering, Data Analysis, ETL, Pandas, NumPy, Matplotlib, Seaborn, Plotly

Deployment & Tools: Model Deployment, Streamlit, Python Scripting, Git, GitHub, Linux, VS Code, Jupyter Notebook, Google Colab, MySQL

TRAININGS & CERTIFICATIONS

Python and Data Analytics | Binary Brains, Nagpur

Aug 2025 – Nov 2025

Data Science and Machine Learning | Binary Brains, Nagpur

Dec 2025 – Apr 2026
